IGME 230

Project 3 Documentation

**** I would like my grade on this project to replace my project 2 grade ****

Goal:

I hope this site is an accurate representation of my skills as a front end developer and can convince a potential employer to hire me.

Audience:

Potential employers: They would look for examples of my work to see where my skills are at and what my skills are. They would also see how well my site works. They could also access my site from all kinds of viewports.

Sources:

The JS for opening a different page is from Stack Overflow

(<https://stackoverflow.com/questions/6321000/how-can-i-go-to-a-new-page-from-within-javascript>)

Changes:

I made my site viewable from any size screen (specifically mobile). A drop-down menu with animation appears when on mobile. I also updated my typefaces to hopefully be more interesting.

Above and Beyond:

I used JavaScript to make the entire project “square” clickable (whereas only the text was clickable before).
